

# Codecademy Posicionamiento CSS

Alonso Bobadilla – Ingeniería Civil Informática

A continuación se mostrarán algunas capturas de la guía seguida en este módulo

## 1. See it to believe it

The screenshot shows the Codecademy interface for the 'CSS Positioning' lesson. The left sidebar contains the lesson title 'CSS Positioning' and a description of the CSS box model. The main area displays a code editor with a CSS rule for the universal selector: 

```
1 * {  
2   border: 1px dashed #0000FF;  
3 }
```

. To the right of the code editor is a diagram titled 'The Box Model' illustrating the components: Margin (Transparent), Border, Padding, and Content. The bottom of the interface shows a green '¡Bien!' (Good!) message and a button to 'Iniciar lección siguiente' (Start next lesson).

## 2. Taking up space

The screenshot shows the Codecademy interface for the 'CSS Positioning' lesson, specifically the 'Taking up space' step. The left sidebar explains the 'inline-block' and 'inline' properties. The main area displays a code editor with CSS rules for a block element and three inline-block elements: 

```
1 * {  
2   border: 1px dashed blue;  
3 }  
4  
5 div {  
6   height: 50px;  
7   width: 100px;  
8   border: 2px solid black;  
9   border-radius: 5px;  
10  /*Add your CSS here!*/  
11  display: block;  
12 }  
13  
14 #one {  
15   background-color: #FF0000;  
16 }  
17  
18 #two {  
19   background-color: #0000FF;  
20 }  
21  
22 #three {  
23   background-color: #FFD700;  
24 }
```

. To the right of the code editor is a diagram showing four colored boxes (red, blue, yellow, green) stacked vertically within a dashed border. The bottom of the interface shows a green '¡Bien!' (Good!) message and a button to 'Iniciar lección siguiente' (Start next lesson).

### 3. Inline-block

codecademy

CSS Positioning

Index.htmlstylesheet.css

#### Inline-block

Good work! If you didn't notice much of a difference, don't worry. Our `<div>`s were `block` elements by default, as we specify different display values, they'll start to move around.

As mentioned, any element that comes in as a block (say, a paragraph) will automatically take up the full width of the page, no matter how much or how little content you put in.

If we specify a display of `inline-block`, however, our blocks are still blocks, but will be able to sit next to each other on the same line.

Instrucciones

Foro de preguntasGlosario

3. Inline-block

```
1 * {
2   border: 1px dashed blue;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 2px solid black;
9   border-radius: 5px;
10  /*Add your CSS here!*/
11  display: inline-block;
12 }
13
14 #one {
15   background-color: #FF0000;
16 }
17
18 #two {
19   background-color: #0000FF;
20 }
21
22 #three {
23   background-color: #FFD700;
24 }
```

### 4. Inline

codecademy

CSS Positioning

Index.htmlstylesheet.css

Did you see that: your `<div>`s all moved onto the same line! You can already start to see how this type of positioning can be useful for navigation bars like the one at the top of the main Codecademy page (where you can click "Learn," "Teach," and so on).

The `inline-block` value allows you to put several block elements on the same line. The `inline` value places all your elements next to one another, but not as blocks: they don't keep their dimensions.

Instrucciones

Foro de preguntasGlosario

4. Inline

```
1 * {
2   border: 1px dashed blue;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 2px solid black;
9   border-radius: 5px;
10  /*Add your CSS here!*/
11  display: inline;
12 }
13
14 #one {
15   background-color: #FF0000;
16 }
17
18 #two {
19   background-color: #0000FF;
20 }
21
22 #three {
23   background-color: #FFD700;
24 }
```

Pantalla completa

¡Bien!

## 5. None!

codecademy

CSS Positioning

CSS Positioning

Suited for HTML elements that are blocks by default, such as headers and paragraphs.

Finally, we'll try out the display value `none`. As you might expect, this prevents the page from displaying the selected element. As you might *not* expect, this removes the selected element from the page *entirely*, including any children and any content. Poof! Gone! (But not gone forever —changing the display value away from `none` will bring everything back.)

Instrucciones

Give it a whirl! Set all your `<div>`'s' `display` property to the `none` value.

Foro de preguntasGlosario

index.htmlstylesheet.css

```
1 * {
2   border: 1px dashed blue;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 2px solid black;
9   border-radius: 5px;
10 /*Add your CSS here!*/
11   display: none;
12 }
13
14 #one {
15   background-color: #FF0000;
16 }
17
18 #two {
19   background-color: #0000FF;
20 }
21
22 #three {
23   background-color: #FFD700;
24 }
```

Siguiente: Margins, Borders, and Padding→

5. None!

## 7. Margin

codecademy

CSS Positioning

CSS Positioning

Let's start with our margins. Adjusting our margins not only moves our element relative to other elements on the page, but also relative to the "walls" of the HTML document.

For instance, if we take an HTML element with a specific width (such as our `<div>` in the editor) and set its `margin` to `auto`, this tells the document to automatically put equal left and right margins on our element, centering it on the page.

Instrucciones

Try it out! Set our div's `margin` property to `auto` to center our div on the page.

Foro de preguntasGlosario

index.htmlstylesheet.css

```
1 * {
2   border: 1px dashed black;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 2px solid black;
9   border-radius: 5px;
10  background-color: #308014;
11  margin: auto;
12 }
```

Pantalla completa

¡Bien!

Iniciar lección siguiente

7. Margin

## 8. Margin top, right, bottom, left

codecademy

CSS Positioning

CSS Positioning

You can also set an element's margins all at once: you just start from the top margin and go around clockwise (going from top to right to bottom to left). For instance,

```
margin: 1px 2px 3px 4px;
```

will set a top margin of 1 pixel, a right margin of 2, a bottom of 3, and a left of 4.

Instrucciones

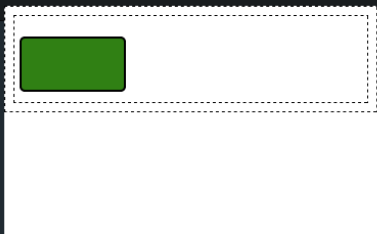

Remove our div's `margin: auto;` on the CSS tab. Using whichever method you like best, give it a top margin of 20px, a right margin of 50px, a bottom margin of 10px, and a left margin of 5px.

[Foro de preguntas](#) [Glosario](#)

Index.html

stylesheet.css

```
1 * {
2   border: 1px dashed black;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 2px solid black;
9   border-radius: 5px;
10  background-color: #308014;
11  margin: 20px 50px 10px 5px;
12 }
```

8. Margin top, right, bottom, left

## 9. Borders

codecademy

CSS Positioning

CSS Positioning

Borders

Well done! You can see how fine-tuning your margins will help you place elements where you'd like them to be on the page.

We've worked with borders before, but it never hurts to have extra practice.

Instrucciones

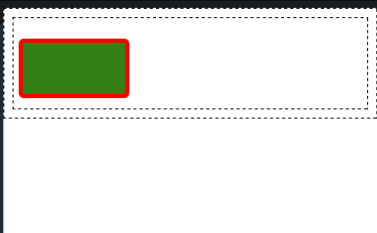

Change your div's border to 4 pixels wide and solid, with the hex color `#FF0000`.

[Foro de preguntas](#) [Glosario](#)

Index.html

stylesheet.css

```
1 * {
2   border: 1px dashed black;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 4px solid #FF0000;
9   border-radius: 5px;
10  background-color: #308014;
11  margin: 20px 50px 10px 5px;
12 }
```

9. Borders

## 10. Padding

codecademy

CSS Positioning

Index.html

stylesheet.css

```
padding-right: /*some value*/
padding-bottom: /*some value*/
padding-left: /*some value*/

Or select them all in one declaration,
like this:

padding: value value value value;

You should also know that if you want
your padding to be the same for all
four sides, you can declare that value
only once. padding: 10px; will give your
HTML element 10 pixels of padding on
all sides.
```

Instrucciones

Go ahead and use your preferred method to give your `div` padding of `40px` on all sides.

Foro de preguntas

Glosario

```
1 * {
2   border: 1px dashed black;
3 }
4
5 div {
6   height: 50px;
7   width: 100px;
8   border: 4px solid #FF0000;
9   border-radius: 5px;
10  background-color: #308014;
11  margin: 20px 50px 10px 5px;
12  padding: 40px 40px 40px 40px;
13 }
```

Instrucciones

or margin values, it puts that space between the element and its reference: for instance, if you have a `<div>` and you give it a `margin-left` of `20px`, it puts twenty pixels between the left margin of that `<div>` and the side of the screen. This effectively moves the `<div>` twenty pixels to the *right*.

If you want to move an element in the other direction, you can give CSS a *negative* value: `margin-left: -20px` will move the element twenty pixels to the *left*.

Give your `<div>` a `margin-top` of `-20px` to see what happens.

Foro de preguntas

Instrucciones

several elements all floating, they all know the others are there and don't land on top of each other.

You can think of the HTML page as sort of like a sea, and floating elements as boats on it: all the boats have positions on the sea, and they all see and steer clear of each other.

(Some of the positioning methods we'll learn in upcoming sections *can* accidentally drop elements on top of each other.)

Let's get started. Set your div's `float` property to `right`!

¡Bien!

## 18. Absolute positioning

codecademy

CSS Positioning

Index.html

stylesheet.css

1 div {  
2 height: 100px;  
3 width: 100px;  
4 border-radius: 5px;  
5 border: 2px solid black;  
6 }  
7  
8 #inner {  
9 height: 75px;  
10 width: 75px;  
11 background-color: #547988;  
12 /\*Add your CSS here!\*/  
13 position: absolute;  
14 margin-left: 20px;  
15 }  
16 }  
17  
18 #outer {  
19 height: 150px;  
20 width: 150px;  
21 background-color: #45ADA8;  
22 position: absolute;  
23 margin-left: 100px;  
24 }

Pantalla completa

Instrucciones

position: absolute gets positioned  
relative to <html>.

To show you how this works, we've set  
the #outer div to have absolute  
positioning. This means that when you  
position the #inner div, it will be  
relative to #outer. (If #outer had the  
default positioning of static, then  
#inner would get positioned relative  
to the entire HTML document.)

Try it out: set #inner's position to  
absolute and give it a margin-left of  
20px.

¿Te trabaste? ¡Te damos un

Foro de preguntas

Glosario

18. Absolute positioning

¡Bien!

Iniciar lección siguiente

## 19. Relative positioning

codecademy

CSS Positioning

CSS Positioning

Index.htmlstylesheet.css

**Relative** positioning is more straightforward: it tells the element to move relative to where it would have landed if it just had the default `static` positioning.

If you give an element relative positioning and tell it to have a `margin-top` of `10px`, it doesn't move down ten pixels from any particular thing—it moves down ten pixels from where it *otherwise would have been*.

Instrucciones

Give it a try: change `#inner`'s position to `relative` and give it a `margin-left` of `200px`.

Foro de preguntasGlosario

19. Relative positioning

```
1 div {
2   height: 100px;
3   width: 100px;
4   border-radius: 5px;
5   border: 2px solid black;
6 }
7
8 #inner {
9   height: 75px;
10  width: 75px;
11  background-color: #547988;
12  /*Add your CSS here!*/
13  position: relative;
14  margin-left: 200px;
15 }
16
17
18 #outer {
19   height: 1500px;
20   width: 150px;
21   background-color: #45ADAB;
22   position: absolute;
23   margin-left: 100px;
24 }
```

Pantalla completa

¡Bien!

Iniciar lección siguiente

## 20. Fixed positioning

codecademy

CSS Positioning

CSS Positioning

Index.htmlstylesheet.css

Perfect! See? This positioning stuff's not so hard.

Finally, **fixed** positioning anchors an element to the browser window—you can think of it as gluing the element to the screen. If you scroll up and down, the fixed element stays put even as `#outer` moves out of the frame!

Instrucciones

Set `#inner`'s position to `fixed`, then scroll up and down a bit. It stays put even as `#outer` moves out of the frame!

Foro de preguntasGlosario

20. Fixed positioning

```
1 div {
2   height: 100px;
3   width: 100px;
4   border-radius: 5px;
5   border: 2px solid black;
6 }
7
8 #inner {
9   height: 75px;
10  width: 75px;
11  background-color: #547988;
12  /*Add your CSS here!*/
13  position: fixed;
14  margin-left: 200px;
15 }
16
17
18 #outer {
19   height: 1500px;
20   width: 150px;
21   background-color: #45ADAB;
22   position: absolute;
23   margin-left: 100px;
24 }
```

## 25. You've done it!

codecademy

CSS Positioning

Index.html

stylesheet.css

### You've done it!

Great work! You've corrected all the CSS and everything's working beautifully.

You now know enough to build and design your own websites. Think about it! You've got the power to make and share content on the Internet. The more you practice, the better you'll get.

Instrucciones

Speaking of practice, hit Save & Submit Code to finish this course and move on to your next project: creating a fancy HTML/CSS resume!
